

After Care Instructions for Laser Treatments

- During the first two days following treatment, care should be taken to prevent trauma to the treated site:
avoid hot baths, hot tubs, saunas, massage and excessive physical activities that cause perspiring.
- For LHR patients: NO shaving for at least 48 hrs. NO OTHER HAIR REMOVAL BESIDES SHAVING.
- Use a high factor sunscreen (at least 30 SPF) and protect the treated area from sunlight for at least two weeks after the treatment.
- Blistered or ulcerated skin can be treated with an Antibiotic Hydrocortisone Ointment.
- If scabs appear after blistering, they should be kept soft with a lubricating cream. DO NOT PICK AT THEM.
- Inform us immediately of any new medications you are taking or any changes to current medications being taken.
